

PROJECT TITLE: OptiCrop: Smart Agricultural Production Optimization Engine

EMPATHY MATRIX FOR THE FARMER:

1. THINKS & FEELS:

- * Will my crop yield be profitable this season?
- * I feel highly anxious about unpredictable rainfall patterns.
- * I hope my investment in seeds and fertilizers doesn't go to waste.

2. HEARS:

- * Peer farmers complaining about unexpected crop failures.
- * Government advisories telling us to change crops based on weather.
- * Market news showing fluctuating crop pricing.

3. SAYS & DOES:

- * Says: "I want to maximize my field's crop output safely without high chemical damage."
- * Does: Manually tastes or touches soil texture, follows traditional schedules, buys standard fertilizers blindly.

4. PAINS:

- * High cost of raw materials against low crop selling price.
- * Lack of automated technical guidance.
- * Sudden crop diseases due to incorrect soil match.

5. GAINS:

- * Predictable and stable high-yield income cycles.
- * Optimized low cost spending on correct targeted fertilizers.
- * Simple digital tool that tells exactly what to grow.
