

PROJECT TITLE: OptiCrop: Smart Agricultural Production Optimization Engine

1. FUTURE TECHNICAL SYSTEM EXPANSION TIMELINE

To scale the platform's core functional intelligence, upcoming enhancement phases target the following developments:

- * Geographic Adaptation: Integrating localized API arrays to pull historical climate maps automatically without requiring manual user entries.
- * Live Sensor Ingestion Protocols: Transitioning to accept active real-time continuous telemetry parameters directly from field-deployed IoT hardware.
- * Granular Fertilizer Advisory: Upgrading the scikit-learn pipeline to output targeted N-P-K correction schedules based on the distance vectors from optimal soil curves.
