

PROJECT TITLE: OptiCrop: Smart Agricultural Production Optimization Engine

1. APPLICATION OPERATIONAL FEATURE VERIFICATION:

The complete integrated software tool successfully loads inside default client browser configurations.
The structural functional execution path operates cleanly:

- * Dynamic Form Parameter Capturing Interface: Displays functional entry components for 7 parameters.
- * Real-time Processing Engine Integration: Successfully maps user requests to internal scikit-learn models without dropping active browser session states.
- * Response Alert Element Rendering: Outputs the computed agricultural target result block visually centered onto the active layout page frame.

OptiCrop: Smart Agricultural Optimization Engine

Nitrogen (N)

Phosphorus (P)

Potassium (K)

Temperature (°C)

Humidity (%)

pH Level

Rainfall (mm)
